Art Unit: 3728

Drawings

1. Color photographs and color drawings are acceptable only for examination purposes unless a petition filed under 37 CFR 1.84(a)(2) or (b)(2) is granted permitting their use as formal drawings. In the event applicant wishes to use the drawings currently on file as formal drawings, a petition must be filed for acceptance of the photographs or color drawings as formal drawings. Any such petition must be accompanied by the appropriate fee as set forth in 37 CFR 1.17(i), three sets of drawings or photographs, as appropriate, and an amendment to the first paragraph of the brief description of the drawings section of the specification which states:

The file of this patent contains at least one drawing executed in color. Copies of this patent with color drawing(s) will be provided by the Patent and Trademark Office upon request and payment of the necessary fee.

Color photographs will be accepted if the conditions for accepting color drawings have been satisfied.

Information Disclosure Statement

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3728

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by McBride (Patent no. 3,121,965). An iron cover is disclosed comprising a heat resistant liner having a padded bottom segment shaped to cover the sole of an iron. The "boot" 11 is made from a single piece of cloth stitched at 36 to define side flaps between stitching 36, note figure 3. Also, end flaps are defined between stitches 36 at opposite ends of the iron shown in figures 3-5 to form heat vents 40 equivalent to that claimed. Elastic band 50 forms an analogous securing means to the extent claimed.

As to claim 2, an abrasion resistant coating of silicon or the like, see McBride column 2, lines 20-22, forms an abrasion resistant cover attached to and covering the heat resistant cotton liner.

Allowable Subject Matter

5. Claims 3-7 are allowed.

Response to Arguments

6. Applicant's arguments filed March 29, 2002 have been fully considered but they are not persuasive. It is not agreed McBride fails to disclose a heat resistant liner to the extent claimed and disclosed.

Nowhere is it gleaned from the present specification that the liner can have *no* heat transmission. Page 4 describes in the Summary of the Invention that the preferred embodiment uses a fabric that is a "flannel type of material for the HEAT RESISTANT (emphasis mine) liner". In fact applicant states on page 7 that the iron is first allowed to cool somewhat before the stowed in the liner so that it won't singe the liner (preferably flannel like a flannel-type shirt if made as described on page 4). Nowhere does applicant use the words "non- transmitting heat" nor do they make it clear the liner is only to be a "non-transmitting heat" liner. Rather the context of the liner is only provided in terms of a heat resistant liner, see page 7 last paragraph.

Accordingly, it is not seen how applicant can represent their device as now being something different than what they originally put in the specification to describe the meets and bounds of the claimed subject matter, simply to avoid prior art advanced before them.

Art Unit: 3728

McBride discloses a “material substantially heat resistant”, column 2, lines 22-23 which is equivalent to the subject matter of applicant’s claimed invention.

Moreover, a substantially heat resistant material manifestly encompasses a “non-transmitting heat resistant material” to a greater extent than a material not substantially heat resistant.

Conclusion

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
